

Introduction

© 李浩东 3190104890@zju.edu.cn

© 孙正男 3190102989@zju.edu.cn

Basic Information

- ***Soft Machine Vision***
- Smart Factory Innovation Club of Zhejiang University
- Class locations: 紫金港月牙楼301
- Class time: Sunday 9:30 to 11:30
- Number of students enrolled: 42

Course Outline

- Image basics: Pixels, Colors, Image formats
- Image processing techniques: Filtering, Binarization, cutting, Morphological transformation, Scale and rotation transformation, Image gradient
- Image pattern recognition: Line and circle detection, Feature point detection, Edge detection
- Image pattern recognition: Blob detection, Feature point detection, Template matching
- Neural network basics: Neuron structure, Multi-layer Perceptron, Handwritten digit recognition, Loss function
- Neural Network Basics: Gradient Descent, Backpropagation
- Neural network basics: Softmax regression, Deep neural network, Convolutional Neural Network
- Neural Network Basics: Recurrent Neural Networks, Attention Mechanism & Transformer, Natural Language Processing, Reinforcement Learning, Generative Adversarial Networks, Server Resources
- Final project and Q&A: Chess board recognition system

Configuration--pip

- Python3.9 [\[link\]](#)
- Remember to add Python to `PATH` and environment variables

```
$ python
Python 3.9.9 (tags/v3.9.9:ccb0e6a, Nov 15 2021, 18:08:50) [MSC v.1929 64 bit
(AMD64)] on win32
Type "help", "copyright", "credits" or "license" for more information.
>>> exit()
```

- Install required packages
 - `python -m pip install -r ./0-introduction/requirements.txt`

- VS Code [\[link\]](#) (optional)
 - Config python3.9.9 in your vscode

Configuration--anaconda

- Anaconda installation package download [\[link1\]](#) [\[link2\]](#)
- The installation process can be referred to [\[link\]](#) (for windows)
- Open terminal in the project folder
- Create a virtual environment and install required packages
 - `conda env create -f ./0-introduction/environment.yaml` (**GPU Only**, its environment name is `vision2023`)
- activate the virtual environment
 - `conda activate <environment name>`
- or you can do in this way:
 - `conda create -n <environment name> python=3.9`
 - `conda activate <environment name>`
 - `pip install -r ./0-introduction/requirements.txt`

```
(vision2023) $ python
Python 3.9.13 (main, Aug 25 2022, 23:51:50) [MSC v.1916 64 bit (AMD64)] :: Anaconda,
Inc. on win32
Type "help", "copyright", "credits" or "license" for more information.
>>> exit()
```

Test configuration

- `python ./0-introduction/show_a_cat.py`
- Press `Esc` or `q` on the keyboard to close the window

```
import sys

print(sys.version)
```

```
3.9.13 (main, Aug 25 2022, 23:51:50) [MSC v.1916 64 bit (AMD64)]
```

```
import cv2
import numpy as np
import matplotlib.colors as mat_color

print(cv2.__version__)

# Read the cat image
path = "./images/cat.jpg"
img_bgr = cv2.imread(path)

print(type(img_bgr))
print(np.shape(img_bgr))
```

```
4.7.0
<class 'numpy.ndarray'>
(493, 493, 3)
```

```
from matplotlib import pyplot as plt

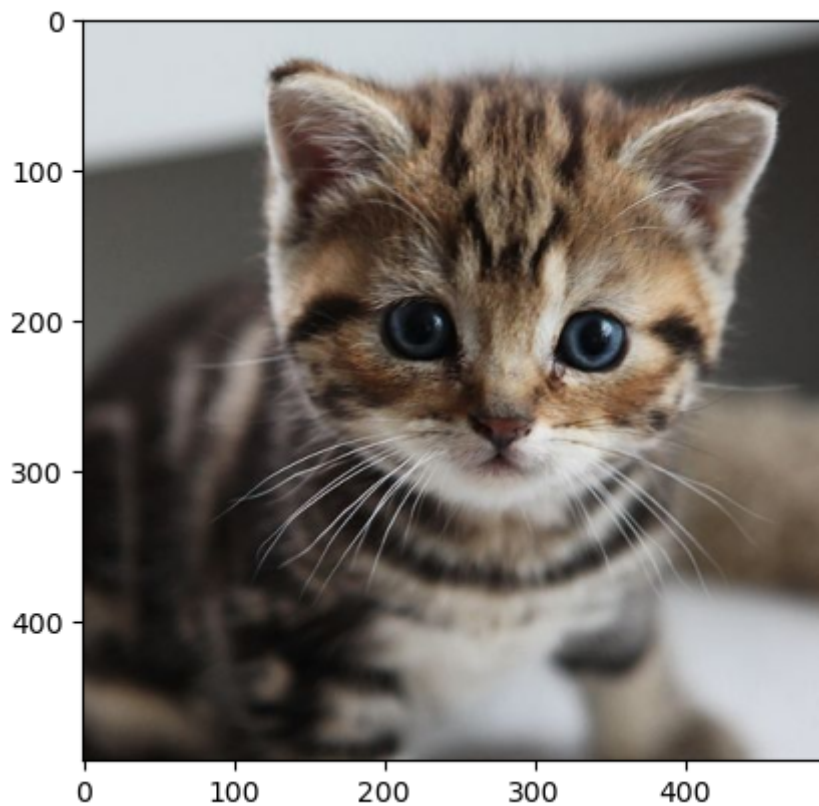

# display img
no_norm = mat_color.Normalize(vmin=0, vmax=255, clip=False)
plt.imshow(img_bgr, norm=no_norm)
```

```
<matplotlib.image.AxesImage at 0x29e343c8ac0>
```

```
# bgr -> rgb  
img_rgb = cv2.cvtColor(img_bgr, cv2.COLOR_BGR2RGB)  
plt.imshow(img_rgb, norm=no_norm)
```

```
<matplotlib.image.AxesImage at 0x29e34422cd0>
```

```
import os

# save the img in csv format
os.makedirs('data', exist_ok=True)
data_file = os.path.join('data', 'cat.csv')
print(data_file)
with open(data_file, 'w') as f:
    f.write('R,G,B\n')
    for row in img_rgb:
        for rgb in row:
            f.write(str(rgb[0]) + ',' + str(rgb[1]) + ',' + str(rgb[2]) + '\n')
```

```
data\cat.csv
```

The End
